Weekly Product Spotlight

Designed Here. Made Yours.

Open this guide at the start of each week. It gives you a theme, two products and starting ideas. You choose the wording, artwork, colors and final look. Move a theme to another week when it fits the work better.

Who	What they do
Designer	Choose the designs, record the design process, organize the footage, prepare COS posts, publish approved content and follow up inquiries.
June	Approve sample spending and order timing, arrange printing, film finished products and record voiceover.
ChatGPT	Edit the supplied footage into finished videos. Send the original clips into the campaign chat when an edit is needed.

The same routine each week

1. Check the suggestions
Use the product plan on page 2. Open the linked shop categories on page 4 and confirm the two products are still listed.

2. Make two designs
Use suitable templates already in the editor. The designs can be completely different. Make clear mockups and prepare the print artwork.

3. Record as you work
Use the short shot list on page 3. Keep original clips. No video editing is assigned to you.

4. Send one batch to June
Send both designs, the recordings, your sample recommendation and a few notes for her voiceover. June can approve printing both.

5. Prepare the posts in COS
Draft the captions and hashtags while footage is being edited. Load the approved final videos when they are ready. Aim for about three posts, adjusted to the material available.

6. Check results
Check published posts, answer relevant questions, record quote requests and tell June what people responded to.

Keep moving: If printing, filming or approval is pending, work on graphics, captions, screen recordings, customer designs or lead follow-up. Suggest the next theme; June decides what becomes an assignment.

Christmas ordering continues. Give a customer a completion or delivery date only after June confirms it for that order.

Suggested products and themes

November 2026 to early January 2027. These weeks are suggestions, not deadlines. Each row can produce two separate samples and several posts. Template suggestions describe styles to look for or adapt; they are not guaranteed template names.

Week of	Theme	Products	Template starting point
Nov 9	Family Christmas	Gildan 18000 crewneck 16 x 16 photo pillow	Family-name badge or festive typography. Photo collage with names.
Nov 16	Thoughtful holiday gifts	Liberty Bags 8502 tote 11.8 oz ceramic mug	Name or initial with artwork suited to the recipient. A second design can use a different style or interest.
Nov 23	Staff and team celebrations	Gildan 18500 hoodie Gildan 5000 tee	Logo-based holiday design for a team; a separate funny or celebratory party design.
Nov 30	Christmas personality	Gildan 18000 crewneck 11.8 oz ceramic mug	One bold, playful holiday design and one simple name, illustration or monogram.
Dec 7	Cozy winter gear	Gildan 18810 quarter-zip YP Classics 1500KC beanie	Clean logo placement, simple emblem or initials. Ask June which decoration method suits the beanie.
Dec 14	Holiday home and hosting	16 x 16 photo pillow Personalized wine glass	Photo, family illustration or winter pattern; separate name or monogram layout for glassware.
Dec 21	New Year celebrations	Gildan 5000 tee Champagne flute	Large 2027 celebration typography; separate names/date layout for the glass. Confirm event timing before promising fulfillment.
Dec 28	Fresh business look	Gildan 64800 polo Liberty Bags 8502 tote	Simple chest logo; larger brand message or graphic on the tote. Use a made-up business for a demonstration.
Jan 4	Birthday planning	BELLA+CANVAS 3001T toddler tee Birthday banner	Name-and-age layout for the shirt; coordinated colors and party artwork for the banner.

Before sending artwork: Check spelling, readable lettering, product color, print size and placement. Keep names and dates editable. Glassware is quoted through the shop; do not present a mockup as a working online glassware template.

Print both when approved. A customer vote is optional. Designs do not need to match or compete with each other. Use existing finished products when they help; new samples are a spending decision for June.

Record it in two sessions

Session 1: the designer records the design process

Shot	What to record	Length
Start	Open the chosen template in the actual designer. Pause before making changes.	8-12 sec
Personalize	Change text, a name, a date or another useful detail. Make one change at a time.	15-20 sec
Improve	Show one color, contrast or layout adjustment.	10-15 sec
Finished designs	Hold each design clearly on screen. Save a still image of each, too.	10 sec each
Your idea	Optional voice-only or on-camera explanation of one design choice.	15-20 sec

For screen recordings, keep the design large and the cursor movement slow. Save the full original recording so ChatGPT can crop it. Hide customer details and account information.

Session 2: June films the finished products

Shot	What to record	Length
Reveal	Lift or unfold the item. For a mug or glass, rotate it slowly.	8-12 sec
Full product	Hold the whole item still. Match the design view from Session 1 when possible.	8-10 sec
Close-up	Show the printed names, artwork and detail in focus. Take two versions.	8-10 sec
In use	Garment on a hanger, pillow on a couch, tote packed or drinkware on a table.	5-8 sec
Photos	Full product, close-up and a styled photo for covers or carousels.	3 photos

Phone footage: vertical, ideally 1080p, clean lens, stable support and soft light. Leave a second still at each end. Upload original clips without music, filters or added text. A model is optional. Outsourced press footage is not required.

Voiceover and editing

Designer: send June three short notes: who the product is for, what you personalized, and your favorite detail. June records a natural voiceover. Upload clips, voiceover, logo and design files into the campaign chat for ChatGPT to edit.

Name files by product and shot, for example **holiday-mug-closeup-1.mp4**. Keep everything for one feature in a single shared folder. Ask for missing shots in one message. Send design recordings first; finished-product clips can follow later.

Turn each feature into content

Three useful posts

Make it: The design process, with June explaining the idea.
Show it: The finished product or a clearly labeled mockup while printing is pending.
Order it: Show what can be personalized and tell customers how to request it.

TikTok ideas to rotate

Idea	What to show
Design with us	Start from a template, make useful changes and reveal the result.
Screen to finished item	Match the mockup to a real product in one short video.
Two customers, two styles	Show how the designs differ for a family, teacher, business or party.
One photo, two gifts	Adjust the crop and layout for a pillow and a mug.
Small design improvement	Explain why spacing, contrast or placement changed.
Customer question	Answer a real question about personalization, ordering or products.

Later, try longer Design With June sessions on TikTok: introduce the occasion, invite ideas, build the design, then show the printed result in a later post. Start with recordings before organizing a live session.

Use the same work elsewhere

Instagram/Facebook: before-and-after carousels, detail photos, Stories and approved customer photos. Pinterest: clear product photos linked to the product or quote page. Use styled photos, flat lays and product close-ups as well as video.

Help customers take the next step

Give each featured design a simple name. Ask interested customers for the design name, product, quantity, sizes and needed date. Prepare their quote in the shop system and have June check pricing and timing. Keep the lead and next follow-up together in the dashboard.
